Umbrella ID
Federated Identity for PaN's

Mirjam van Daalen

Umbrella is part of several EU projects:

- **EuroFEL- ESFRI project Free Electron Lasers of Europe**

- **PaNData-Europe, PaNData ODI- FP7 projects**

- **CRISP – Cluster project of different ESFRI projects**

- **CALIPSO – I3 synchrotron community**

- **NMI3 - I3 neutron community**

- **BioStruct-X**

- **Instruct – ESFRI project**

- **CALIPSOplus (NA1 + JRA2)**

- **LEAPS**

What is the Umbrella?

The Umbrella is an identity system designed by the European Photon and Neutron source facilities (PaNs').

It aims to make life easier and science more productive both for the facilities and their users.

Requirements user community

What are the present and upcoming user needs?

- 40% of the users (40% of >30.000) do experiments at different facilities, transfacility access for users (see also new user survey 2016 PaNdata.eu)
- Acces to and management of experimental data.
- Remote experiment access
- Access to efficient data analysis tools.
- Remote file access
- Access to super computing centers
- Access to cloud infrastructures / Access to DaaS platforms
- Access to other federations
- Minimal administration load for the users

At the end all this needs a unique persistent user identification to have unified access to these tools.

Photon Sources

What is the Umbrella?

- The Umbrella first of all provides any PaN-user (and effectively anyone interested in scientific discovery) with a unique identity, the UmbrellaID.

- Equipped with such an ID a user can go on a virtual journey around the facilities with a single sign-on.

- Since the same Identity is known at each of the facilities, a user can more simply access or share data, manage administrative processes or make use of services and infrastructures provided by the PaNs'.
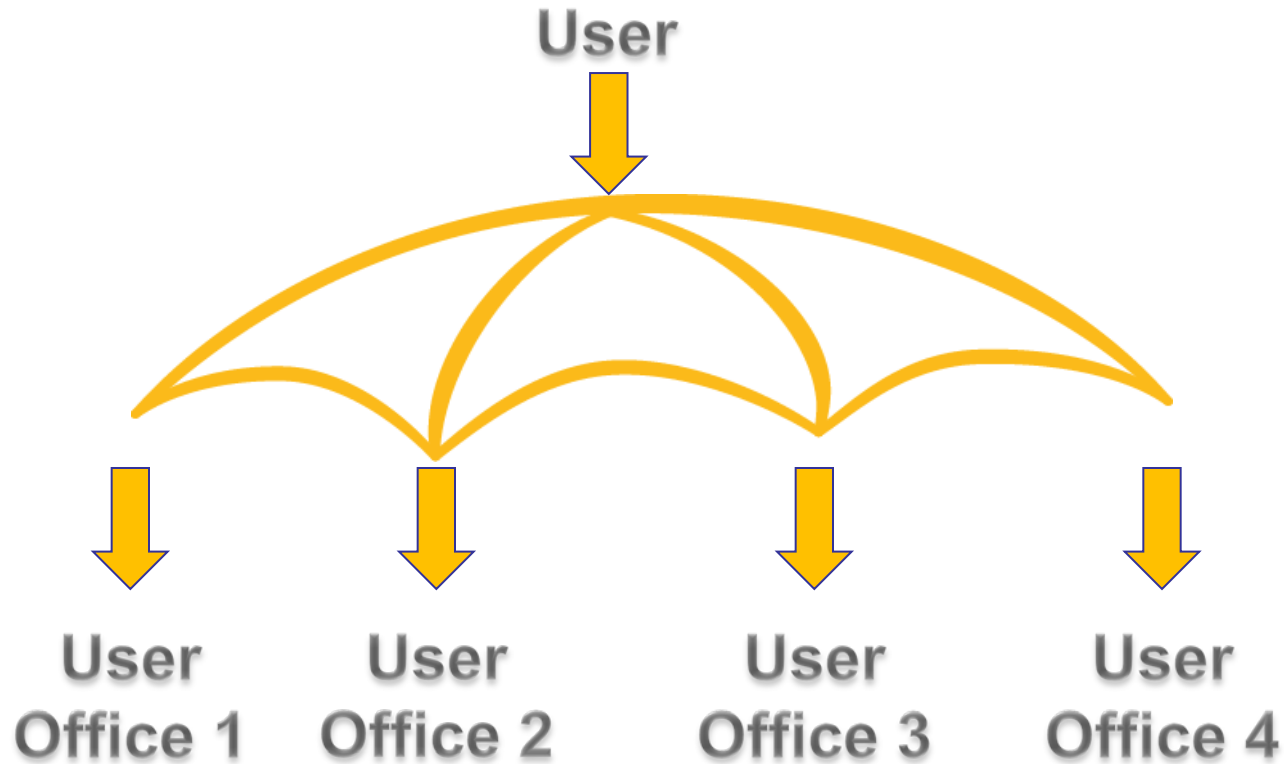

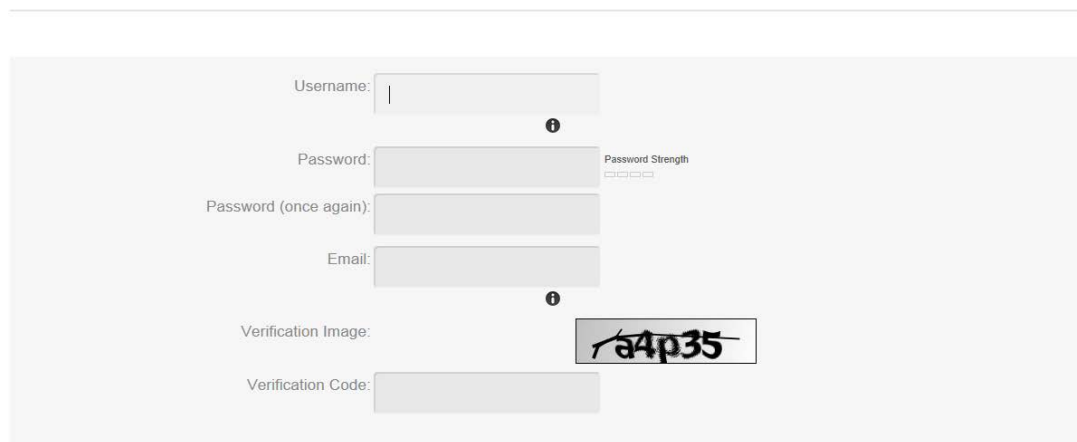

How do I get an UmbrellaID?

- Simply register for an account under https://umbrellaid.org. The only requirement is a valid email address to confirm the registration.

How do I get an UmbrellaID?

- In the registration process one chooses a unique username and a secure password. Under the hood, Umbrella creates a unique and persistent ID which will never change.

- Changing the username or the email-address won't have any effect on the UmbrellaID; a user can use the same UmbrellaID throughout his entire scientific career (and beyond), which is what makes the UmbrellaID unique and persistent.

What happens to old accounts?

- Many users have registered earlier at one of the facilities Web-based User Offices (WUO) and have an account there, experiment related documents or scientific data. The Umbrella will affect none of these and old accounts remain perfectly valid.

- However, the Umbrella nicely integrates with the WUOs, which provide a simple mechanism to create a link between a local WUO account and the UmbrellaID.
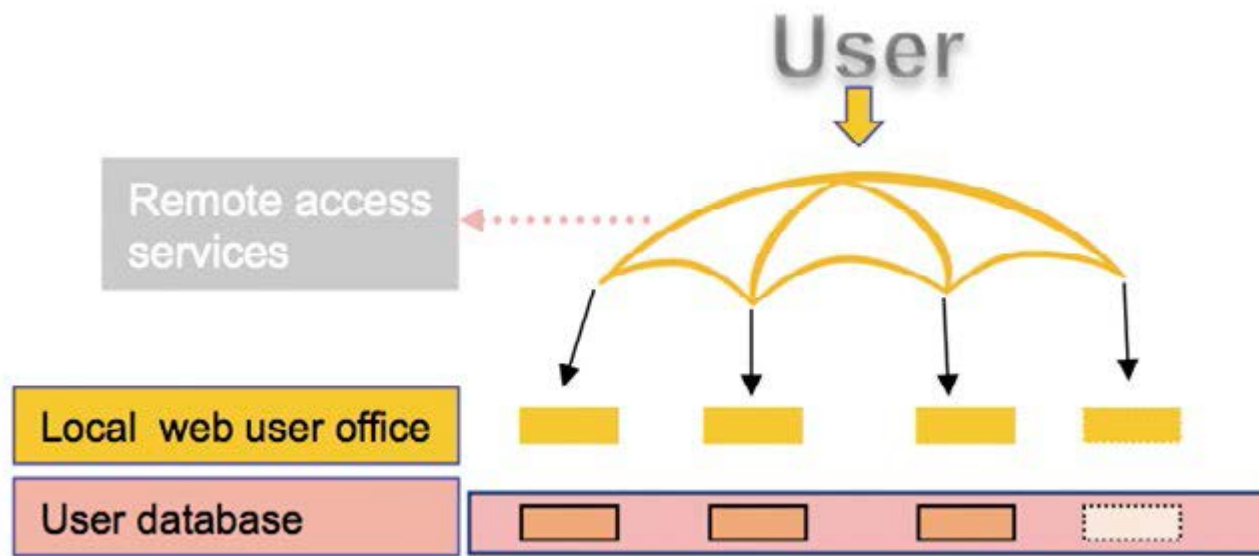

What happens to old accounts?

- A number of users will have WUO accounts at several facilities. Creation of the links has to been done for each WUO individually, which might appear inconvenient, but can finally not been avoided since each facility requires a local registration for safety and lawful reasons.

- With the creation of the links, all actions possible with the WUO account can afterwards be performed with the very same UmbrellaID and just a single-sign on – at each WUO a user is known to.

Are my data safe?

- Yes. First of all, UmbrellaID.org stores only a minimal set of information, a username, a password, the ID itself and the email-address. The information is stored in form of (salted) one-time hashes to ensure maximum security.

- The entire Umbrella is based on Shibboleth, a well-established and widely used open-source implementation of federated identity standards namely the OASIS Security Assertion Markup Language (SAML).

- This guarantees that not only the personal data stored at UmbrellaID.org or the local WUOs but the entire communication process is conforming to highest security standards.

What services can I use?

The services supporting the UmbrellaID are published
on the UmbrellaID.org website.

So far the Umbrella offers access to WUOs, Open Access
Software and Data catalogues. The number of services is
slowly, but steadily growing.

It is expected to cover (almost) all WUOs and a significant
number of related services end of 2017.

Umbrella Characteristics

Concept
- Unique persistent Identifier on EU scale
- independent of the home institution
- life time account
- account owned by the user
- single sign-on
- no possibility for cross-facility information pull

Rely on existing local user office structure
- Great experience
- Do It Yourself operation by the user
- User offices: supervising; manage authorizations
- Principal investigators: have responsibility for their teams and can handle authorization within their group

Umbrella Characteristics

Authorisation is delegated to the systems participating in Umbrella

- for highest grade of independence
- in heterogeneous environments
- no complicated trust relationships

What's next?

- The deployment of the Umbrella and the implementation of new services are on-going efforts. The Umbrella collaboration is intensively working on Umbrella enabled data catalogues to allow users to access, share, manage or cite their scientific data.

- In collaboration with the Geant3+ project options to expand the scope of the Umbrella have been developed.

- One aim is enabling Umbrella to provide services within the edugain super-federation, which connects the GÉANT (GN3plus) Partners' federations, thereby substantially extending the outreach of the UmbrellaID.

Status Umbrella

MoU signed in March 2015 by 14 partners: DLS, Elettra, EMBL, HZB, KIT, PSI, ESRF, ALBA, SOLEIL,DESY, EU XFEL, ILL, STFC, INSTRUCT

New partner HZDR (since August 2016)

Request from Forschungszentrum Jülich

Status of Service Provider deployment

Future projects

- Umbrella part of CALIPSOplus proposal Trans National Access program of Photon facilities. **NA1 and JRA2 from 01.05.2017**

- Umbrella part of NEMO2020 proposal Trans National Access program of Neutron facilities, **not accepted**

- PANORAMIC proposal to EINFRA-22-2016 : User-driven e-infrastructure innovation, **not accepted**

- AARC – collaborating and acting as pilot project

- Pilot in **EduTeams** project of GEANT, use case to create an attribute authority for Umbrella.

- PaNDaaS project rejected in 2014, but might be revised and handed in for new cluster INFRAOESC-04-2018 ESFRI cluster call March 2018

- LEAPS IT WP6

umbrellaID

UmbrellaID Status

- New website is online – https://umbrellaid.org/
- EduGAIN online (prepared Geant 3+ project, end2017):
    - Access via own University credentials
- Link to Moonshot non web based acces(GEANT):
    - Moonshot online machine console Diamond.
- Attribute Authority online end 2017, collaboration with EduTeams (GEANT)
    - Gives possibility to interact with other federations requiring attributes

UmbrellaID Status

- Link to ORCID (publication ID, mid 2017)
- Link to Open IRIS Laboratory Management System used at PSI for users of new Innovationpark at PSI.
- Access to Indico at most facilities
- Umbrella has to become critical service; Umbrella will become only access for external users at PSI over 2018

PR activities 2017:

- Email to all users of the collaboration via user office portals end 2017

- Write on each UO website, what you can do with umbrellaID

- PR actions will be coordinated within the umbrellaID collaboration.

- Contact with lightsources.org (and LEAPS) to promote UmbrellaID

CALIPSOplus NA1 :

From first part of 2017 the following activities will be financed for umbrellaID:

– Promotion of umbrellaID and the unified access platform.
– Coordinated development of umbrellaID extensions, i.e. connection to ORCID
  and other infrastructures such as supercomputing centers.
– Technical helpdesk for the users of umbrellaID and its attached systems
  (e.g. Moonshot, iCAT).
– Maintenance of the website of the umbrellaID collaboration.
– Close connection to RDA, FIM4R and AARC projects.

– Also development of Data Management Plan (DMP) for CALIPSOplus based on local data policies.

umbrellaID

CALIPSOplus WP24

JRA2 - Demonstrator of a Photon Science Analysis Service (DaaS)

Task 24.6 Extend and deploy the Umbrella authentication system as the standard authentication mechanism to fully support different non-web-based authentication mechanisms to be able to service a broader range of facilities (eduGain + JISC Assent) with differing needs and capabilities.

PaNDaaS group now called PaNdata

Activities going on:

- Preparation WG3 LEAPS IT document
- Collaboration with JRA2 CALIPSOplus
- Umbrella consortium
- Preparation of new PaNDaaS (cluster call) proposal

Meetings twice a year:
- Grenoble ESRF December 2016
- Barcelona April 2017.
- ESRF June 2017
- XXXX Jan-Feb 2018

Wir schaffen Wissen – heute für morgen

Thank you for your attention!
